Android Project Configuration

- Gradle - new libraries

```
dependencies {
    compile fileTree(dir: 'libs', include: ['*.jar'])
    testCompile 'junit:junit:4.12'
    compile 'com.android.support:appcompat-v7:23.4.0'
    compile 'com.squareup.retrofit2:retrofit:2.1.0'
    compile 'com.google.code.gson:gson:2.7'
    compile 'com.squareup.retrofit2:converter-gson:2.0.2'
}
```

- AndroidManifest.xml

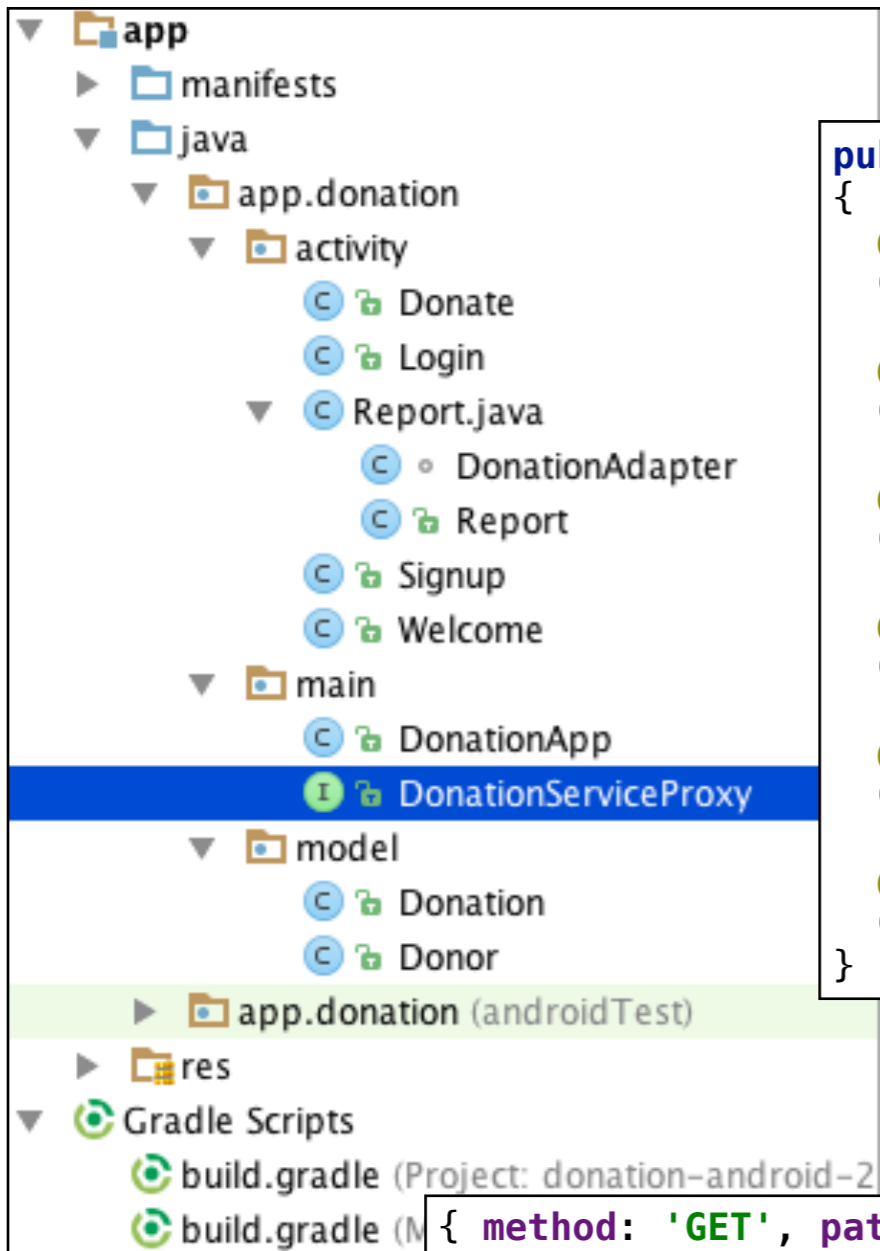

- new 'permission' to access internet

```
<?xml version="1.0" encoding="utf-8"?>
<manifest xmlns:android="http://schemas.android.com/apk/res/android"
    package="app.donation" >

    <uses-permission android:name="android.permission.INTERNET"/>

    <application
        android:name=".main.DonationApp"
        android:allowBackup="true"
        android:icon="@mipmap/ic_launcher"
```

Android Project New class - DonationService

```
public interface DonationService
{
    @GET("/api/users")
    Call<List<User>> getAllUsers();

    @GET("/api/users/{id}")
    Call<User> getUser(@Path("id") String id);

    @POST("/api/users")
    Call<User> createUser(@Body User user);

    @GET("/api/donations")
    Call<List<Donation>> getAllDonations();

    @GET("/api/candidates")
    Call<List<Candidate>> getAllCandidates();

    @POST("/api/candidates/{id}/donations")
    Call<Donation> createDonation(@Path("id") String id, @Body Donation donation);
}
```

```
{ method: 'GET', path: '/api/users', config: UsersApi.find },
{ method: 'GET', path: '/api/users/{id}', config: UsersApi.findOne },
{ method: 'POST', path: '/api/users', config: UsersApi.create },
{ method: 'GET', path: '/api/donations', config: DonationsApi.findAllDonations },
{ method: 'GET', path: '/api/candidates', config: CandidatesApi.find },
{ method: 'POST', path: '/api/candidates/{id}/donations', config: DonationsApi.makeDonation },
```

  public String method;

  public Donation (int amount, String method)
  {
    this.amount = amount;
    this.method = method;
  }
}
```

DonationApp - Attributes

```
public class DonationApp extends Application
{
    public String          service_url  = "http://10.0.2.2:4000"; //Standard Emulator IP
    public DonationService donationService;
    public boolean        donationServiceAvailable = false;

    public User           currentUser;
    public List <Donation> donations      = new ArrayList<Donation>();
    public List <User>    users          = new ArrayList<User>();
    public List <Candidate> candidates  = new ArrayList<Candidate>();
    ...
}
```

- 'service_url' string for remote service
- donationService member for accessing the service
- donationServiceAvailable flag if service offline
- currentUser - the logged in user
- donations - the list of donations made so far
- users - list of valid users
- candidates - list of available candidates

DonationApp - onCreate

```
@Override
public void onCreate()
{
    super.onCreate();
    Gson gson = new GsonBuilder().create();

    Retrofit retrofit = new Retrofit.Builder()
        .baseUrl(service_url)
        .addConverterFactory(GsonConverterFactory.create(gson))
        .build();
    donationService = retrofit.create(DonationService.class);

    Log.v("Donation", "Donation App Started");
}
```

- Create the proxy service 'donationService', with the appropriate Gson parsers

Signup - standalone version

```
public class Signup extends AppCompatActivity
{
    @Override
    protected void onCreate(Bundle savedInstanceState)
    {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_signup);
    }

    public void registerPressed (View view)
    {
        TextView firstName = (TextView) findViewById(R.id.firstName);
        TextView lastName = (TextView) findViewById(R.id.lastName);
        TextView email = (TextView) findViewById(R.id.Email);
        TextView password = (TextView) findViewById(R.id.Password);

        Donor user = new Donor(firstName.getText().toString(), lastName.getText().toString(),
                                email.getText().toString(), password.getText().toString());

        DonationApp app = (DonationApp) getApplication();
        app.newUser(user);

        startActivity (new Intent(this, Welcome.class));
    }
}
```

    {
        Toast toast = Toast.makeText(this, "Donation Contacted Successfully", Toast.LENGTH_LONG);
        toast.show();
    }
}
```

Welcome - Retrieve list of Candidates

```
@Override
public void onResume()
{
    //...

    Call<List<Candidate>> call2 = (Call<List<Candidate>>) app.donationService.getAllCandidates();
    call2.enqueue(new Callback<List<Candidate>>() {
        @Override
        public void onResponse(Call<List<Candidate>> call, Response<List<Candidate>> response) {
            app.candidates = response.body();
        }

        @Override
        public void onFailure(Call<List<Candidate>> call, Throwable t) {
            app.donationServiceAvailable = false;
            serviceUnavailableMessage();
        }
    });
}
```

- Anonymous inner class version of remote call

Donate - With Candidate Support

- Valid candidates, retrieved in Welcome, displayed in a spinner here

The screenshot shows a mobile application interface for donations. At the top, there is a blue header with the word "Donation" and a status bar showing signal strength, battery, and the time 6:00. Below the header, the text "Welcome Homer" and "Please give generously" is displayed. There are two radio buttons for payment method: "PayPal" (selected) and "Direct". To the right of these is a spinner control showing the number "0". Below the spinner is a text input field containing the name "lisa". Underneath the input field is the label "Amount:" followed by a vertical red line. At the bottom left is a "DONATE" button, and at the bottom right is the text "Total so far: 0". The bottom of the screen shows the standard Android navigation bar with back, home, and recent apps icons.

Candidate Adapter

- Populate the spinner with the list of candidate names

```
protected void onCreate(Bundle savedInstanceState) {  
    ...  
    CandidateAdapter adapter = new CandidateAdapter(app.candidates);  
    candidateSelection.setAdapter(adapter);  
}
```

```
private class CandidateAdapter extends BaseAdapter implements SpinnerAdapter {  
    private final List<Candidate> data;  
  
    public CandidateAdapter(List<Candidate> data) {  
        this.data = data;  
    }  
  
    @Override  
    public int getCount() {  
        return data.size();  
    }  
  
    @Override  
    public Object getItem(int position) {  
        return data.get(position);  
    }  
  
    @Override  
    public long getItemId(int i) {  
        return i;  
    }  
  
    @Override  
    public View getView(int position, View recycle, ViewGroup parent) {  
        TextView text;  
        if (recycle != null) {  
            text = (TextView) recycle;  
        } else {  
            text = (TextView) getLayoutInflater().inflate(  
                android.R.layout.simple_dropdown_item_1line, parent, false  
            );  
        }  
        text.setTextColor(Color.BLACK);  
        text.setText(data.get(position).firstName);  
        return text;  
    }  
}
```

Donate - Standalone Version

```
