Settings

Overview

Android Preference Framework facilitates:

- Storage of list of key-value pairs
- Conventionally referred to as *Settings*
- *Settings* accessible from menu
- *Settings* pane presents user option to enter data
- Once entered, data persists

key : value

username : password

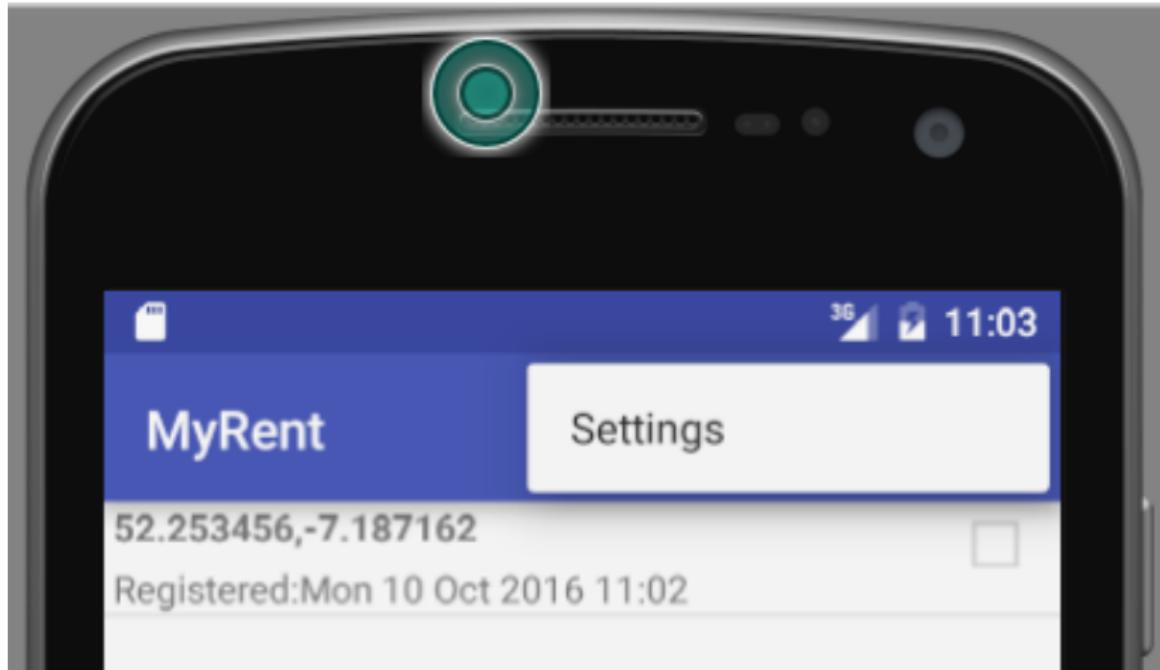

Settings

Accessible from overflow menu

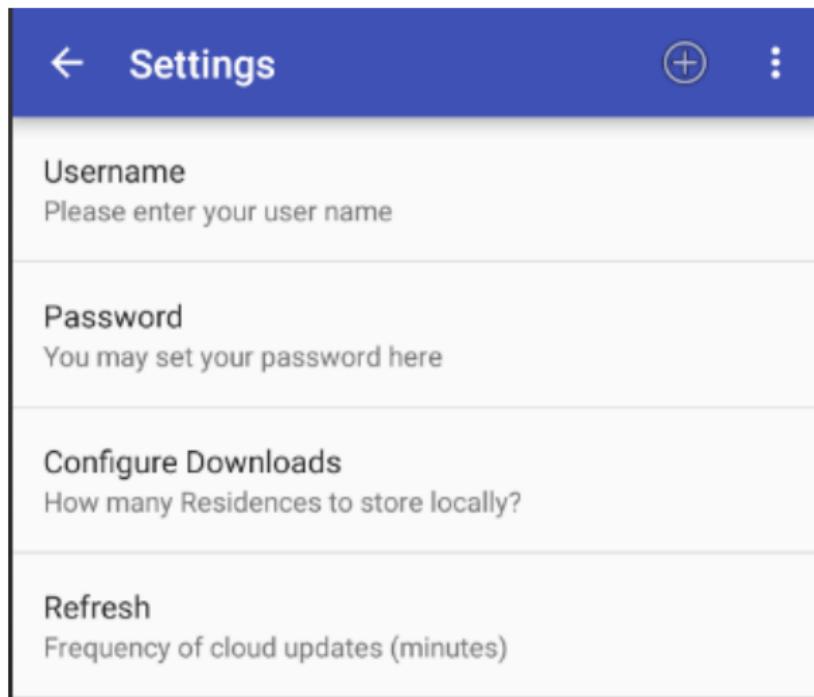

Settings

Accessible from overflow menu

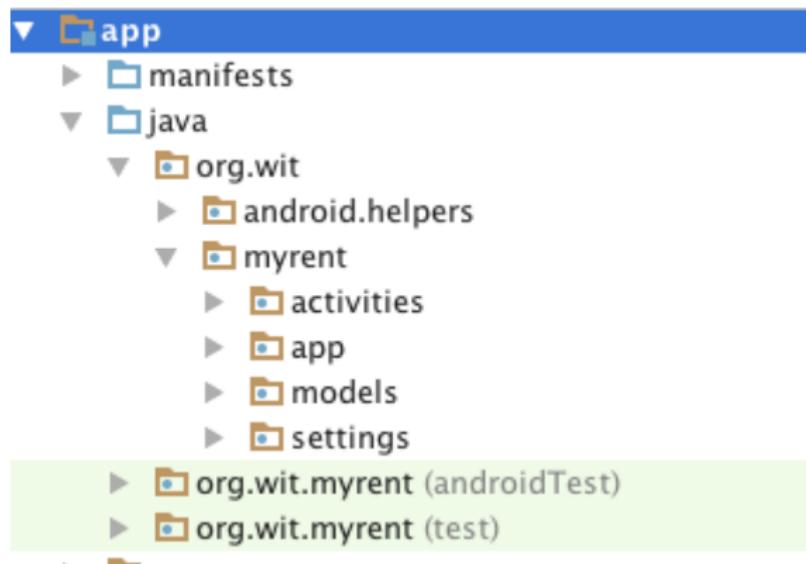

Settings

User input pane

Settings

Package layout - settings classes in own package

SettingsActivity

onCreate

```
public class SettingsActivity extends AppCompatActivity {  
    @Override  
    protected void onCreate(Bundle savedInstanceState) {  
        super.onCreate(savedInstanceState);  
        ...  
        ...  
    }  
}
```

SettingsActivity

Inflate menu

```
public class SettingsActivity extends AppCompatActivity {  
    ...  
    ...  
    @Override  
    public boolean onCreateOptionsMenu(Menu menu) {  
        getMenuInflater().inflate(R.menu.residencelist, menu);  
        return true;  
    }  
}
```

Settings

Add a settings menu item - residencelist.xml

```
<menu...>
    <item ...>
        ...
    </item>

    <item
        android:id="@+id/action_settings"
        android:orderInCategory="100"
        app:showAsAction="never"
        android:title="@string/settings"/>

</menu>
```

SettingsFragment

Launch SettingsActivity

```
@Override  
public boolean onOptionsItemSelected(MenuItem item) {  
    ...  
    ...  
    case R.id.action_settings:  
        Intent intent = new Intent(getActivity());  
        startActivity(intent, SettingsActivity.class));  
        return true;  
    ...  
    ...  
}
```

SettingsFragment

UI declared in res/xml/settings.xml

```
public class SettingsFragment extends PreferenceFragment
{
    @Override
    public void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        addPreferencesFromResource(R.xml.settings);
    }
}
```

Settings UI

File: settings.xml

```
<PreferenceScreen xmlns:android="http://schemas.android.com/apk/res/android" >
    <EditTextPreference
        android:key="username"
        android:summary="@string/username_summary"
        android:title="@string/username"/>

    <EditTextPreference
        android:key="password"
        android:summary="@string/password_summary"
        android:title="@string/password"
        android:inputType="textPassword"/>

    <EditTextPreference
        android:key="nmr_residences"
        android:summary="@string/nmr_residences_summary"
        android:title="@string/nmr_residences"
        android:inputType="text"/>

    <EditTextPreference
        android:key="refresh_interval"
        android:summary="@string/set_refresh_interval_summary"
        android:title="@string/set_refresh_interval"
        android:inputType="text"/>

</PreferenceScreen>
```

Settings UI

User interface screen

Settings

SettingsFragment - Capture & persist user-input settings

```
private SharedPreferences prefs;  
  
@Override  
public void onStart()  
{  
    super.onStart();  
    prefs = PreferenceManager  
        .getDefaultSharedPreferences(getActivity());  
}
```

Settings

SettingsFragment - listen for settings changes

```
// Implement this interface  
OnSharedPreferenceChangeListener
```

```
// Implement OnSharedPreferenceChangeListener method  
@Override  
public void onSharedPreferenceChanged(SharedPreferences prefs, String key)  
{  
}  
}
```

Settings

SettingsFragment - listen for settings changes

```
@Override  
public void onSharedPreferenceChanged(SharedPreferences prefs, String key)  
{  
    Log.d(TAG, "Key " + key + " " + prefs.getString(key, ""));  
}
```

Settings

SettingsFragment - register and unregister listener

```
@Override  
public void onStart() {  
    ...  
    prefs.registerOnSharedPreferenceChangeListener(this);  
}
```

```
@Override  
public void onStop() {  
    ...  
    prefs.unregisterOnSharedPreferenceChangeListener(this);  
}
```
